## 0 Various Theorems

## 1 Problem 1

Let  $(X, d_X)$  and  $(Y, d_Y)$  be metric spaces. A function  $f : (X, d_X) \rightarrow (Y, d_Y)$  is called *Lipschitz continuous* if there is a constant  $L > 0$  so that

$$d_Y(f(p), f(q)) \leq L d_X(p, q)$$

for all  $p, q \in X$ . For  $\alpha > 0$ , we say  $f$  is *Hölder continuous (with exponent  $\alpha$ )* if there is a constant  $C > 0$  so that

$$d_Y(f(p), f(q)) \leq C d_X(p, q)^\alpha$$

for all  $p, q \in X$ . In particular, Hölder continuous with exponent 1 means the same thing as Lipschitz.

- (a) Fix a point  $p \in X$ . Show that the map  $g : X \rightarrow \mathbb{R}$  defined by  $g(x) = d(x, p)$  is Lipschitz continuous, with constant  $L = 1$ .
- (b) Prove that any Hölder continuous function (with any exponent  $\alpha > 0$ ) is uniformly continuous.
- (c) Prove that if  $f$  is Lipschitz continuous and bounded, then  $f$  is Hölder continuous with exponent  $\alpha$ , for any  $0 < \alpha \leq 1$ .
- (d) Let  $[a, b]$  be a closed interval, and suppose  $f : [a, b] \rightarrow \mathbb{R}$  is  $C^1$  (meaning its first derivative exists and is continuous on  $[a, b]$ ). Show that  $f$  is Lipschitz continuous.
- (e) Suppose  $f : \mathbb{R} \rightarrow \mathbb{R}$  is Hölder continuous with exponent  $\alpha > 1$ . Show that  $f$  is constant.

## 2 Problem 2

On the interval  $(100, \infty)$ , define functions  $f(x) = x + \sin(x)$ ,  $g(x) = x$ ,  $p(x) = x + \sin(x) \cos(x)$ , and  $q(x) = p(x)e^{\sin(x)}$ .

(a) Using facts we proved about limits and derivatives, prove that

$$\lim_{x \rightarrow \infty} \frac{f(x)}{g(x)} = 1, \quad \lim_{x \rightarrow \infty} \frac{f'(x)}{g'(x)} \text{ DNE}, \quad \lim_{x \rightarrow \infty} \frac{p(x)}{q(x)} \text{ DNE}, \quad \text{and} \quad \lim_{x \rightarrow \infty} \frac{p'(x)}{q'(x)} = 0.$$

(b) For both scenarios  $\frac{f(x)}{g(x)}$  and  $\frac{p(x)}{q(x)}$ , explain why these results do not contradict L'Hôpital's rule.

*Note: even though we haven't learned about  $\sin$  and  $\cos$  yet, you are free to use any familiar properties of them you wish.*
